

US Internet Ensures Customer Security with SAS 70 Type II Examination Completion

Minneapolis, MN - July 15, 2016 –

US Internet, an international provider of Internet and hosting services, today announced that it completed the SAS 70 Type II examination by the Auditing Standards Board of the American Institute of Certified Public Accountants (AICPA). US Internet's documented policies and procedures to ensure the security of customer equipment, services and data not only met industry standards, but also proved to provide the highest level of information security.

"The SAS 70 Type II examination completion validates the documentation and statements provided to our clients," said Kurt Lange, US Internet co-founder and VP of Operations. "The completion of this examination on our first attempt again is a testament that our processes and procedures not only ensures the security of customer data, but also provides the highest level of integrity to our clients and partners."

The SAS 70 Type II examination focused specifically on the company's datacenter and US Internet's hosted service. Additionally, independent auditors investigated other aspects of the company's architecture, including management philosophy, human resources policies, training, and a variety of controls that ensure a company culture of client protection (i.e., employee honesty and integrity). All data was presented in an auditable format, including employee manuals, security doctrines, training records, past employee records, and sample customer contracts.
